Use-Case Diagram

Use Case Diagram

Use-Case Scenarios

Scenario 1: Login

The scenario starts with a user choosing to login as a <u>Regular User</u>, <u>Registered User</u>, or creating a new <u>Registered User</u> account. Choosing the <u>Regular User</u> option will <u>proceed</u> to the Search Movie use case. Logging in as a <u>Registered User</u> will verify with the <u>database</u> that the login is correct, then <u>proceed</u> to the Search Movie use case. Creating a new <u>Registered User</u> will require the user <u>entering</u> in their name, address, credit and/or debit card account information, and confirming registration with the <u>database</u> then <u>proceeding</u> to the Search Movie use case.

Scenario 2: Search Movies

The scenario starts with a <u>user looking</u> for a <u>movie</u> from a list of <u>movies</u> from the <u>database</u> using a <u>movie search bar</u>. The <u>database returns</u> the <u>movie</u> if it is found, or <u>informs</u> the <u>user</u> that the <u>movie</u> was not found if it is not in the <u>database</u>. The <u>user</u> then <u>selects</u> the <u>movie</u> they want to watch and then proceeds to select theatre. <u>Registered users</u> can search for and view unannounced movies (movies that have been flagged as not publicly announced).

Scenario 3: Select Theatre

The scenario starts with the <u>user</u> viewing the <u>theatres</u> that the movie is available, and <u>select</u> <u>theatre</u> to <u>proceed</u> to view showtimes from.

Scenario 4: Select Showtime

The scenario starts with the <u>user</u> viewing the <u>showtimes</u> for the <u>theatre</u> in the <u>database</u>. The <u>user</u> then <u>selects</u> the <u>showtime</u> that they want from the list of <u>showtimes</u>. If the <u>seats</u> in the showtime are full, then the user cannot select that showtime.

Scenario 5: Select Seats

The <u>user will</u> be able to view graphically available <u>seats</u>, supplied from the <u>database</u>. The <u>user can <u>select</u> a single <u>seat</u> based on availability, and will <u>proceed</u> to the Buy Ticket Use Case. If the user is a <u>Registered User</u>, and the movie is not publicly announced, a <u>Registered User</u> will be able to <u>select</u> a <u>seat</u> only if 10% of the seats have not already been purchased.</u>

Scenario 6: Buy Tickets

The scenario starts with the regular user entering in their credit card information into the form, then pressing confirm. The credit card information is then confirmed with the <u>financial institution</u>. The <u>database</u> then assigns a ticket with a ticket ID to the <u>database</u>. The <u>regular user</u> is then emailed the <u>ticket</u> with ticket information.

The scenario is the same for the <u>registered user</u>, except that their <u>payment (credit card</u> or <u>debit card</u>) information is saved in the <u>database</u>. The <u>database</u> populates the form before the user presses confirm.

Scenario 7: Cancel Tickets

The scenario starts with the <u>user</u> viewing their bought <u>tickets</u>. The <u>user</u> then selects the <u>ticket</u> that they want to cancel. If the <u>showtime</u> of the <u>ticket</u> is more than 72 hours away, the cancellation is <u>processed</u>. A <u>Regular User</u> then receives a <u>payment</u> of the original ticket price minus a 15% administration fee that can be credited to a future purchase from up to a year from the current date. A <u>Registered User</u> receives the full <u>payment</u> amount from the ticket purchase.

Scenario 8: Registered User Pays Annual Fee

The scenario starts with the <u>Registered User</u> choosing to upgrade their membership status, or has their membership status expire. If they are a new <u>Registered User</u>, they are prompted to make a <u>payment</u> of the annual fee. If the last <u>payment</u> of the <u>Registered User's</u> annual fee was a year ago, they are prompted to make another <u>payment</u> of the annual fee.

Scenario 9: Registered User Receives Movie News

When new movie news is added by the <u>admin</u> to the database, the movie news is queried from the database and is sent to the Registered User's email.

Scenario 10: Admin Adds Movie

When a movie is <u>added</u> by the <u>admin</u> to the database, a message is <u>sent</u> to the registered users by email.

Scenario 11: Admin Updates to Public Movie

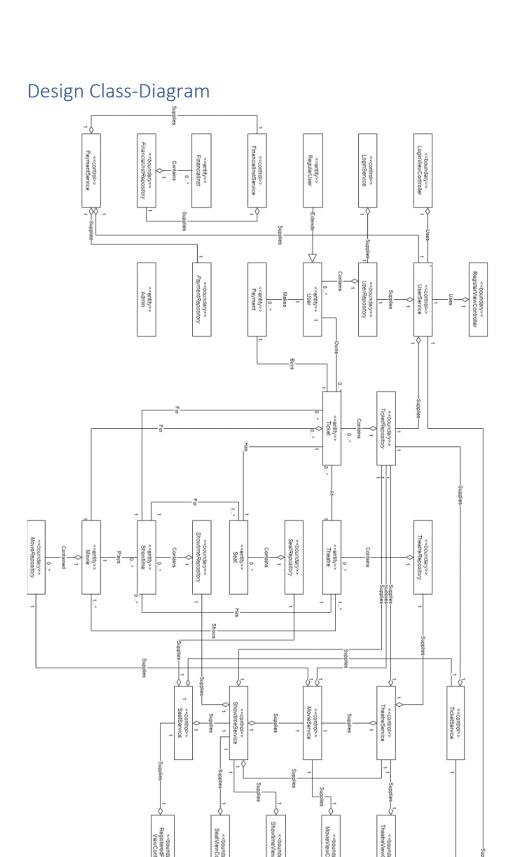

In this scenario an <u>Admin</u> updates a <u>movies</u> status in the <u>database</u> as publicly available. <u>registered users</u> are <u>emailed</u> news about the update. The <u>movie</u> is now viewable by <u>regular users</u> in the search <u>movie</u> use case, and <u>registered users</u> can now <u>select</u> and <u>buy</u> more than 10% of the available seats.

Scenario 12: Admin Removes Movie

In this scenario \underline{admin} removes the \underline{movie} from the $\underline{database}$ and a message is \underline{sent} to the registered users by email.

List of Candidate Objects that are Traceable in Use-Case Scenarios

- User
- Regular User
- Registered User
- Admin
- Movie
- Movie Search bar
- Theatre
- Database
- Showtime
- Seat
- Payment
- Credit card
- Debit card
